

## Meeting Minutes 11/10/2020

Someone from the CDR presentation asked about how much weight the rats can carry, we didn't have a good answer so we should look into that.

Dr. Shrestha suggested that we look into a Quad op-amp, this may reduce the cost of the circuit as well as being able to handle up to 4 channels in a single op amp. He also asked about the spikes in recordings possibly being over filtered, due to being cut off on screen. He also suggested that we look in MAX 7400 series 8<sup>th</sup> order filters. They are much cheaper than the ones we have found and are much higher quality, so it may not impact our budget to include them.

Dr. Li mentioned that we don't need to include the 5% overhead since our project is a university sponsored one.
