

## Team Meeting-10/16/14

### Minutes:

1. Test the circuit, battery switching and design the PCB.
2. Microcontroller integration on the PCB.
3. Improve EVM circuitry and switching circuitry.
4. Can use SPI (2 shift registers), I2C and use interrupts for logic design.
5. By 10/21-Breadboard should be working, evaluation board should be working and selection of microcontroller which will be used in the final design.
