

## **MINUTES – Fly Rollers Meeting 5 (10/8/15)**

All team members present and stakeholder Michael Santora and instructor Feng Li.

### **Discussion:**

Most items we talked about are listed as action items but we also mentioned the following topics:

- a) We don't need to worry about securing the positioning sensors
- b) Our financial contact is Susie (3<sup>rd</sup> floor of BEL)
- c) Evan is hoping to post a potential schedule soon to be reviewed by Santora
- d) We discussed the client interview specifications and Santora approved them
- e) Finally we talked about how the coils need to simultaneously stabilize and rotate the motor

### **Action Items:**

- 1) Everyone needs to read, mark up, and have questions on Brent's and Kevin's Theses
- 2) Everyone needs to help get the Single Axis Single Bearing machine working again
- 3) Evan and Brian need to work on algorithms for positioning and rotating the Flywheel. This is an action item that corresponds to their ECE450 project
- 4) Santora may ask Dr. Law to present for us on the motor's magnetics

Respectfully Submitted,

Gavin Meyer
