

Meeting Minutes 11/5/2020

We still plan to meet on Monday 11/9/2020 in order to go over the CDR and who is going over what slides, once they have been finalized.

We reviewed and submitted the Wikipage. We updated the client names and roles of each team member.

We found the Arduino code on the Spike Recorder page, it seems to only go out to 6 channels, but the code looks easy enough to modify up to 8 channels.

We briefly discussed who would go over some key slides, but did not really specify which slides would be covered by who.

We briefly considered breaking the CDR into 2 separate sections, one for human and the second for rat, but we decided it would be better to go over similar topics for each next to each other.

For the rat design we discussed the fact that there isn't much information on external placement of electrodes on rats, since most are done using surgery and are internal.

We decided to add slides showing our data acquisition so far.

We decided to have the slides due by 8pm Friday in order to submit them for early review.
