February 14, 2018 1:30pm-2:00pm

Agenda Notes/Status Reports

Status: Our main issue that we are running into is that we cannot detect single instruction insertions. We are having difficulty obtaining deterministic data due to noise, etc. Once we get a computer, it will be nice to have a permanent setup.

For the final test report, we should explain the different modifications and instructions and their sensitivity. This week, Hannah and Lydia plan to work on researching an algorithm for configuration changes.

We have several different antenna options and plan to test them on different PCB designs to see which one works best.

Key Decisions

* Key Decision: Snapshot day 3 is 3/6.

Action Items

* Team: Logbooks are due this week on 2/16.

* Client: Send computer with requirements and Vivado license.
