

## Meeting Minutes

Date: 11-9-18

Attendees: Hailey Johnson, Wei Zhao, Jordan Cates

---

### Announcements:

- New version of the CDR
- 

### Meeting:

- Database
    - Student should represent student researcher(Like future teams)
    - Care-Giver should be like parents
    - Want to make sure there aren't redundant structures
      - Keep it more consolidated
    - Security
      - Could just give a canned response when users try to input something
        - Like if they try to input data into a field that they don't have permission to access, tell them they don't have access to that data section and don't input the data.
    - Need a session level of the database
      - All of the data that will be the same for each sample
        - Things like Type of room, Mic, Noise, Profile, Facilitator will not change from audio sample to audio sample.
    - Link audio files in a tree system, not a sort of table
      - Since this storage will most likely be static
    - Mic type
      - Don't worry about it too much, if necessary, we can just make it an input
    - User types
      - We'll put together our final database diagram
        - Then figure out what users will need to access
        - Maybe Researchers won't access name, but will access everything else
        - Name might not even be stored, maybe just on the user account.
  - Cloud Platform
    - After we graduate, we just need to make sure that it is able to be transported to his workstation or to another cloud platform for the next group to use.
    - Might want to start a Virtual Machine on the platform and use that as a workstation to do our experiments on.
- 

To Do for Next Meeting (11-9-18):

Everyone:

- Work on CDR

\*\*\*Highlight important things
