

Testing Meeting 10-9-2020

The free software for the emotive only allows 5 recordings.

Some of the connections on the emotive device were really loose and one was already broken.

We need to pick up some saline solution this weekend, Jake volunteered to do this.

When we attempted recordings there were some issues picking up electrodes, most likely due to lack of saline solution.

Once we were able to pick up some signals, we noticed that it seemed like walking involved mostly Θ and β waves. Anxiousness was mostly α and γ waves.
