

Meeting 10/23/14

Meeting in senior design suite

Goal- Discuss cameras and revisit sensors as full team

Discussion-

Expect tunnels to require between 8.5 and 17.5 meters of cable for robot.

Discussed sensors to use for volumetric data retrieval- decided that two sensors (6P2Y0E02B and DM00112632) would form a sensor pair able to find accurate ranges in tunnel. Decided that 5 sets of sensors would be enough.

Goal next thursday- Plan client meeting for week of Nov. 17

Goal this thursday- talk cameras
