

## Team meeting Agenda 5-6-15

- EXPO went GREAT! We got a lot of feedback from the judges who a lot happened to be SEL employees.
  - There is an encryption relay (SEL-3022) that we could employ to encrypt our messages after gateway.
- Discovered another purpose for the project.
  - Future relay Ethernet traffic from merging units.
  - This lead to an idea on how to load the network.
    - Simulate a merging unit to generate traffic on the network.
- We will be sending Normann Fischer a materials request now that we understand that we cannot meet project deliverables without at least another gateway.
  - We are looking into finding a 'managed 5-port switch' to achieved matched performance and configuration of the SEL-2730M managed switch.

What we're doing this week:

- Updating the wiki page & portfolio.
- Citizenship forms.
- Creating a game-plan for the first week of the next semester.
