

## Team Meeting-9/11/14 [Only Instructor Present]

### Minutes:

1. From Ryler-Two relays narrowed down. No MOSFETs or Electromechanical relay to be used in the switching circuit.
2. From Abe-Client will currently use only four Goofy glasses so a prototype to charge only 10 batteries simultaneously required by the end of semester.
3. From Pankaj-PCB Designing in progress. Acquiring all required libraries and component footprints.
4. IC adaptor for breadboard testing to be made since getting it customized is out of budget.
5. Design review next week. Show all designs of the prototype/project before implementation or fabrication.
6. Research power supplies after design review.
