

## Instructor Meeting 10-13-2020

We discussed that we will be able to order the subscription for the emotive device whenever, we just need to let Dr. Kumar know.

We then presented our snapshot to the instructor and client, since they couldn't make it to the snapshot.

They really liked the current presentation for snapshot 1.

Dr. Li had some questions about the data required for Machine Learning.

- The CS majors can use the emotive device to collect some preemptive data while we build the device
- In addition, we will have access to the high school students data as well
- Dr. Kumar also mentioned that there might be publicly available data from previous papers, he volunteered to look into this further

Some suggestions that were made for the snapshot 2 involved making more formal figures and animations to help get our points across better.

Dr. Li informed us that the DVP is first and foremost a PLAN on how to validate the findings of our data and our device. For this we should most be able to compare it to the emotive device.
