

MINUTES – Fly Rollers Meeting 13 (1/28/16)

Dr. Santora, Dr. Li and all team members present

Discussion:

- a) We all discussed our progress from last week
- b) We determined that we definitely need to know the absolute position of the flywheel

Action Items:

- 1) Philip needs to prepare ordering forms and purchase the ribbon cable
- 2) Evan will continue working with KiCAD. He needs to get the experimental board datasheet and be thinking about how to regulate power on the PCB
- 3) Brian will investigate current draw and potential power supplies. He will also research software sinusoids
- 4) Gavin will work with Santora to start building the flywheel. He will also continue researching the theses and code composer
- 5) Everyone needs to research parallel communication and find everything in the theses about that

Respectfully Submitted,

Gavin Meyer
