

MINUTES - Fly Rollers Meeting 7 (10/22/15)

All team members present and stakeholders Michael Santora and Herb Hess.

Discussion:

- a) There are additional files for the flywheel project available at S:\Senior Design\Flywheel (Or a similarly named directory)
- b) There will be a workshop next Tuesday (10/27) for the Wiki page which the webmaster (Brian) will attend.
- c) We will be doing a design presentation on 11/5 at 4:30 (This is a Thursday at the normal meeting time). We will need to provide an overview of the following:
 - i) Where we are
 - ii) Where we're going
 - iii) What we're doing

We'll need to put a PowerPoint presentation together to help with this.

Action Items:

- a) Calculate size of the power supply we'll need, using a coil current bias of 1.75 A and bearing in mind that we are limited to ± 0.7 A.
- b) Confirm number of microcontroller's we'll need for the project and get this number written in our log books.
