

Meeting Minutes 1/15/2021

We checked in with each other on how break went.

After that we determined that this semester was going to mainly be about collecting data from the device. We decided that Thursdays during the normal class time would be used every week, starting on the week of the 25th, for collecting data.

We need to order the electrodes for the Rat edition of the headset.

We will need to label each data set according to what the person was doing during that test.

For validation we will need to use excel and do duplicate tests with our device and the emotive device.

Kate looked into the butterworth filter. It got complicated, so we decided to just go with the current design and test it.
