

Yifan Zhu: The last week we've successfully logged into the computer following the procedure sent by Mike. And we found somewhere in the password and we have sent an EMAIL to Mike asking relevant questions and we are waiting for the reply. Part of meeting with smarty and last night talking about some issues related to this lab procedure. So, we would like to retell it so that we won't have any misunderstanding or miss any important part. The first thing is we need to EMAIL the relevant materials that related to each lab before we get started with each other, right? Actually, I'm really little confused about the circuit diagram. As Smadi mentioned last night, would you mind explain more about it?

Abdallah: You ask me?

Yifan Zhu: Yeah, the circuit diagram

Abdallah: So, I told you that we need like a physical connection. I ask you to prepare which equipment you want to connect to like you show me you should me a RTAC. But I need to know the us schematic diagram that you are gonna use in your implementation. So I ask you to send me what is the circuit you want me to connect together? Like you want to can I was thinking that you are going to use the Kocos test set. Then you told me we are gonna use RTAC. I was confused. I want from you to prepare the material for me which device to connect like the architect with agt net or what, or are you using the Kocos tested? That's what I need you to prepare.

Yifan Zhu: Okay, I see. We checked the senior design for last year's lab procedure and we found it very difficult to you see clearly the pictures about the connection would you mind sending us more clear pictures of the equipment we may use?

Abdallah: Yes. So which equipment you are gonna use? Are you using the equipment in a G10 or G11. I mean that's your equipment, the RTAC or the Kocos tested because I saw one of the experiments and last team. They used Kocos test set.

Doctor Johnson: Abdallah, when you refer to G10 and G11, they have no idea what you're talking about because they haven't been in the campus.

Abdallah: I like from previous team, I saw they have used Kocos set. I want to make sure like which equipment they are going to use.

Doctor Johnson: The labs at the team set up before involve using the Kocos test set and the software for communicating with it. Wherever that equipment is right now, I know at one point Hari had moved it to G10, G11, but I thought it was back in G10 now. Wherever it needs to be for them to do the project, that's where it should be. No one else needs it right now.

Abdallah: Great. I'll take some pictures today and send you the picture by night like by evening.

Yifan Zhu: Sure. Also we'll work it out to make a list. Also send an EMAIL all of you. Thank you. And share about the password. So I mentioned last night, so shall we just send an EMAIL to ask for the access.

Abdallah: You send us like three. I told you yesterday like you have sent us 3 types of both words. Two of them are the administrative passwords. Those used by Mike and one is for the SEL Accelerator you can search and use their manual you can find the bus was there. I told you can send an EMAIL to Mike or send him and I'm a reply to the ticket that he already created by the Doctor Brian.

Yifan Zhu: About the other teams if other teams are using the same equipment at the same time. So maybe we should arrange a time with them, right?

Abdallah: Actually now if you heard doctor Brian he said like no one is using that Kocos set. I'll check today and G10 lab. And let you know and i'll take all the picture for you.

Yifan Zhu: Thank you.

Abdallah: Sure.

Doctor Johnson: No other teams are using the equipment that you're supposed to be using. Thank you.

Yifan Zhu: I have finished the questions. I think that's it. We will make a list very soon and we should and we will EMAIL you all of you. Thank you for your time and have a good day.
