

Time: 9/24/2020

Team Recorder: Yi Ding

Topics: Our Assessment

Results: This meeting we mainly talked about three subjects:

ECE444 Labs

RTAC-Real Time Automation Controller

SCADA-Collect data and analysis, then control the machines.

SCADA is like the headquarter which collects information and data from RTAC, then by analyzing it, machines are operated by it. They are both related to the lab ECE444.

After meeting: We need to do some research on these three. Also, we need resources about ECE444 Lab. The lab introduction, the lab report, the video of processing the lab.
